**Stablecoin to speed up
and lower the cost of
payments in the Chilean
market.**

Millions of Chileans pay too much

2%-4%

It is the interest in any transaction or payment in Chile, since that percentage goes to the payment processor.

Little use of stablecoins

In Chile, stablecoins are rarely used because the Chilean peso is very strong in relation to the dollar and it is not convenient.

CLPT will be a stablecoin that replicates the value of the Chilean peso, in the Hedera network, to allow all kinds of payments at low cost and in real time.

It will be decentralized, collateralized by HBAR and other tokens on the network.

Mint CLPT

Receive
CLPT

Pay with
CLPT

Burn and get
HBAR/tokens

Why use CLPT?

Money and inclusive payment system, both for banked and unbanked.

Transparent

Through **Hedera Blockchain**, the value will be obtained through oracles and the supply will always be available.

Cheaper

The cost of making a payment with CLPT will only be the cost of gas in the network, without further intermediaries.

Massive

It can be used by people (with or without financial history), micro, small and medium-sized companies, both for B2C and B2B payments.

Faster

Unlike banks and traditional payment networks, it will work 24x7 for payments at all times.

Business model

Model

To mint CLPT, the collateralization will be 150%, with an annual rate of 1% as payment to the protocol.

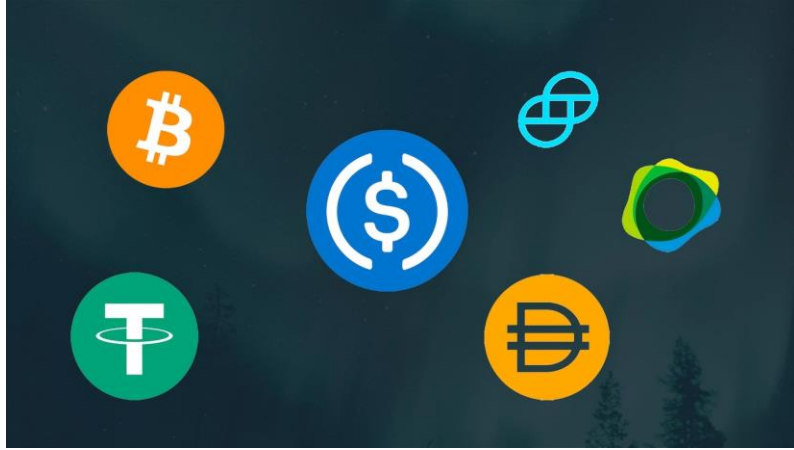

Collateralization

HBAR, USDC*, and others.

* Current demo use USDC as collateral

Competitors

Stablecoins for USD and payment systems in Web2.

Differentiation

- Less volatility against the dollar in the Chilean market.
- Reduction of costs for payments with Chilean Peso.
- Better integration with payment systems thanks to ISO 20022 through the Hedera network.

Talent

Néstor Campos

Founder/Technical
Manager

+13 years working in many
technologies products/companies.

nescampos

Founder of Techgethr (a Product Hub
company)

Also he has experience in Web3 products.

Winner of some hackathons and
builder of many products (in
Web3 and Web3).

Thank you
